There are several distinct but still related domains that it makes logical sense to split up the work in.

For group 1:

1. Login: Enter a username, check if it's valid, if it is, open up the correct user profile
2. Admin: add or delete users
3. Search functionality: Search all photos by tags

These share functions in overall control flow.

For group 2:

1. Album management: create, rename, delete albums.
2. Photo management: add, edit, delete photos

In general, we're going to split up our project along these lines.
